

Tigern

Tiger

är

ett

kattdjur

som

endast

lever

i

asien.

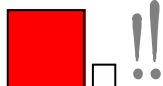

Tigern

är

det

största

nu

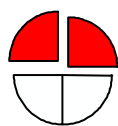

levande

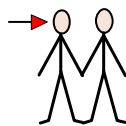

kattdjuret.

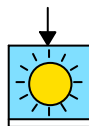

man

delar upp

de

idag

förekommande

beståndet

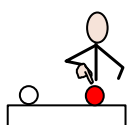

6

i sex

underarter.

utöver

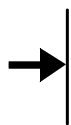

detta

känner

man

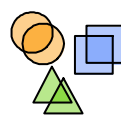

till

3

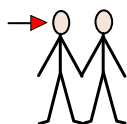

tre

utdöda

underarter.

De

flesta

tigrar

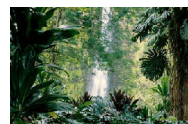

lever

i

fuktig

tropisk

och

tempererade

subtropisk

lövskog,

men

finns

även

i

löv-

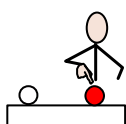

och

barrskogar.

i

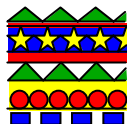

denna

miljö

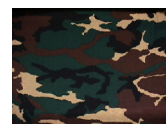

pälsens

mönster

bra

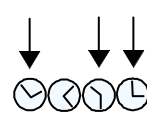

kanouflage.

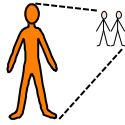

=

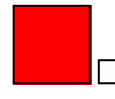

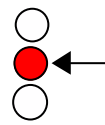

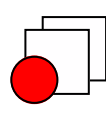

+

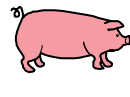

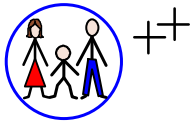

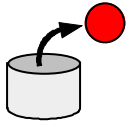

Tigern är en god simmare och badar ofta.

+

den jagar ensam och äter främst medel stora djur

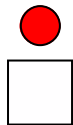

+

,

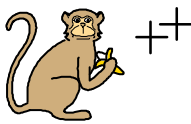

ur familjerna svin och hjortdjur, men tigern äter

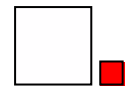

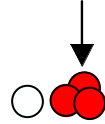

++

det den kommer över, så den äter också fisk, fåglar,

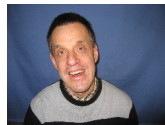

+

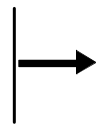

apor och andra små djur.
