

Delfinen

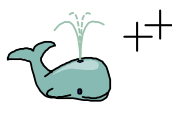

Delfinen

tilhör

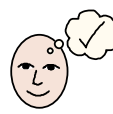

familjen

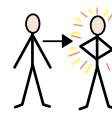

valar

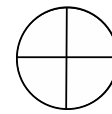

och

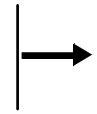

kan

bli

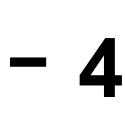

allt

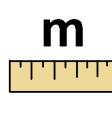

från

1,4

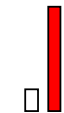

-

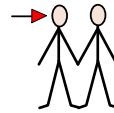

4

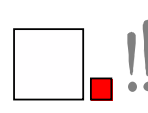

meter

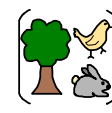

långa,

de

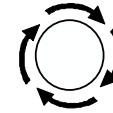

minsta

arterna

väger

omkring

50

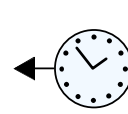

kilo

och

späckhuggaren

har

en

vikt

av

ungefär

9000

kilo.

Delfiner

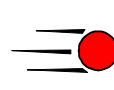

kan

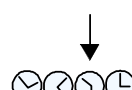

simma

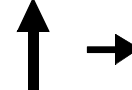

väldigt

snabbt,

ibland

upp

till

55

km

i

timmen.

i

delfinernas

huvud

finns

ett

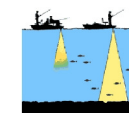

organ

som

möjliggör

eko-lokalisering.

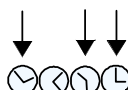

Därför

ser

pannan

ofta

ut

som

en

bula

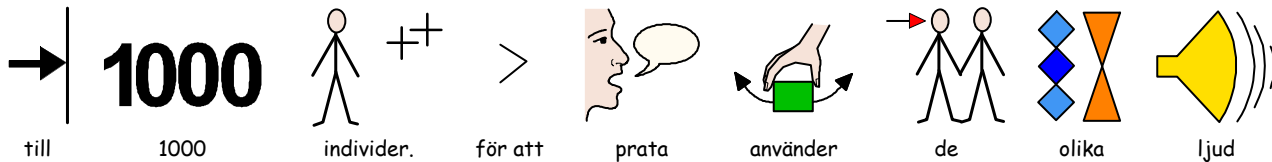

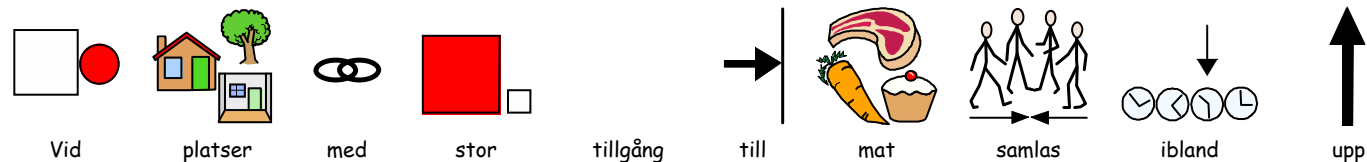

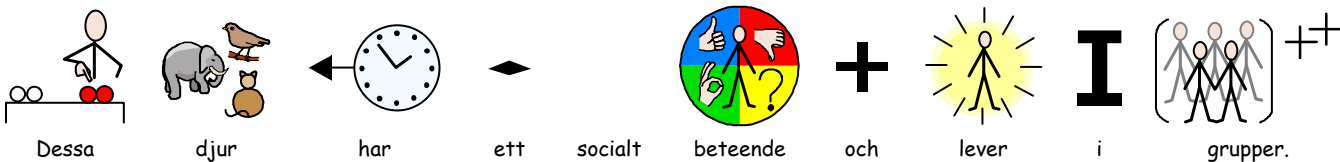

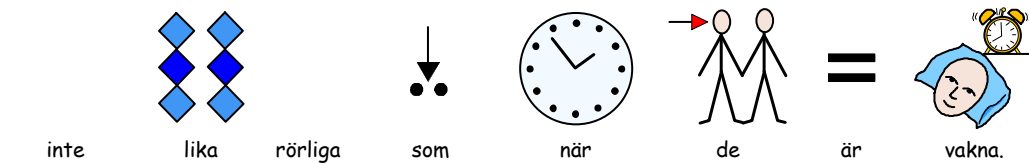

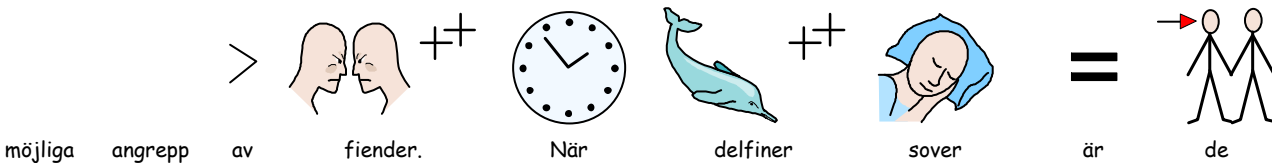

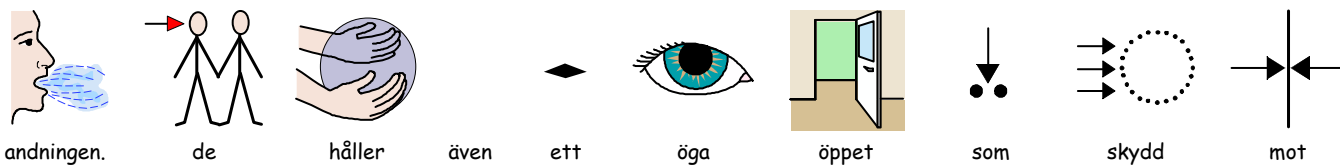

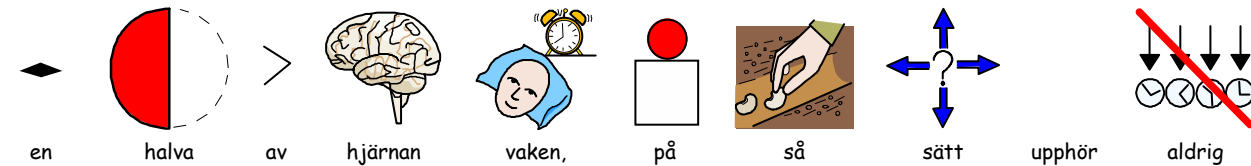

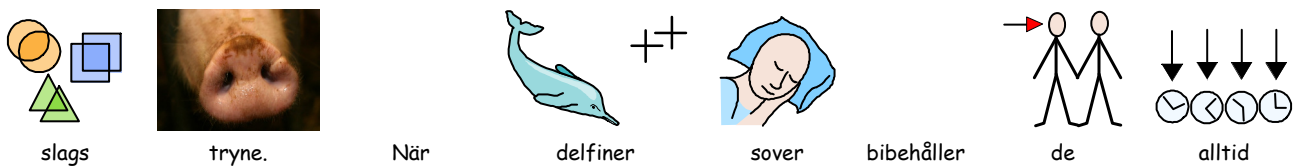

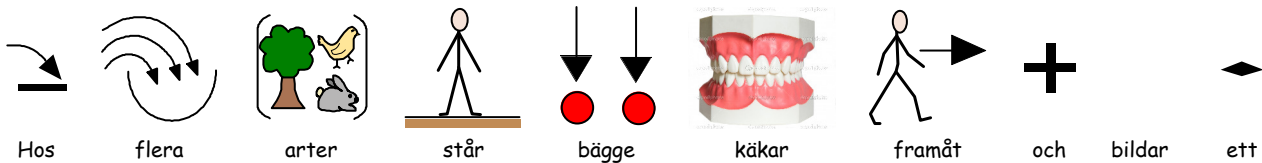

som

kallas

"melon".

Sammansättningen

>

av

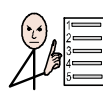

en

grupp

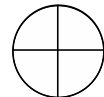

är inte

förutbestämd.

Trots

allt

=

förekommer

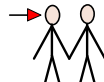

starka

anknytningar

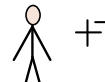

mellan

de

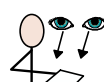

olika

individerna

som

visar sig

i

vården

för

sårade

eller

sjuka

djur.

Delfinen

äter

mest

fisk,

men

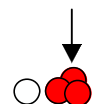

även

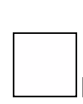

kräftor

och

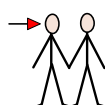

andra

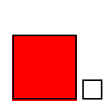

små

djur.

De

stora

späckhuggarna

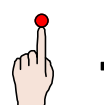

äter

mest

säl.

Det

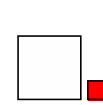

finns

exempel

på

små

delfiner

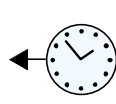

som

i

grupp

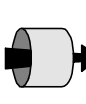

har

dödat

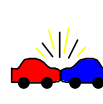

hajar

genom

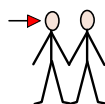

att

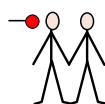

krocka

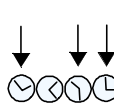

med

dem.

Deras

ofta

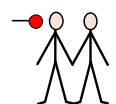

vänliga

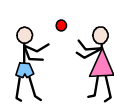

uppsyn

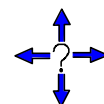

och

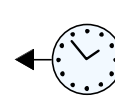

deras

lekfulla

sätt

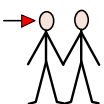

har

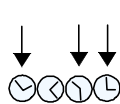

gjort

att

de

ofta

finns

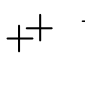

i

olika

shower.

De

är

lätta

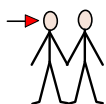

att

träna

så

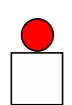

de

är

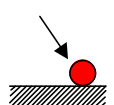

populära

på

delfinarier,

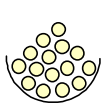

där

det

finns

många

olika

föreställningar

med

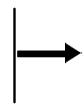

just

delfiner.
